Competenze scientifiche e professionali	
	Il principale interesse scientifico è nel campo dei processi chimici e fisici nel sistema Terra e dei loro effetti sui cambiamenti nella composizione dell'atmosfera e sul clima. Nel corso della carriera ha aperto alcuni importanti campi di ricerca nei quali è oggi considerata fra i massimi esperti internazionali: l'aerosol organico e i suoi effetti sulla formazione delle nubi, il contributo di composti organici derivanti dall'attività biologica dell'oceano all'aerosol marino, una metodologia di

semplificazione della composizione chimica organica nell'aerosol che oggi è alla base delle parametrizzazioni dell'aerosol organico in modelli regionali e globali.

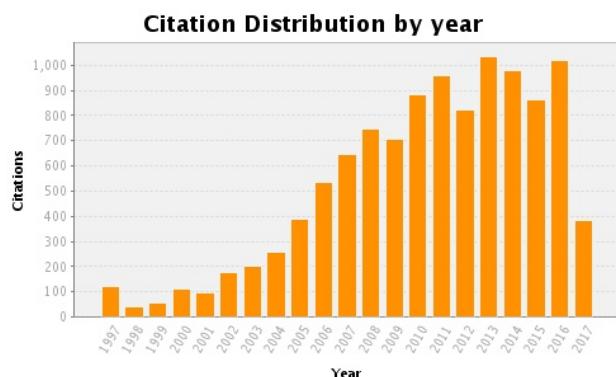

Grazie a questi risultati gestisce oggi un grande numero di collaborazioni scientifiche con i maggiori gruppi europei e statunitensi nel campo delle scienze dell'atmosfera e del clima. Questo è evidenziato dalle collaborazioni nella vasta e qualificata produzione scientifica, dall'elevato numero di presentazioni a invito nei principali convegni del settore e dal grande numero di progetti scientifici ai quali ha preso parte.

In virtù della competenza su molte delle problematiche inerenti alla scienza del Sistema Terra è stata chiamata a fare parte di diverse Commissioni di lavoro internazionali, dettagliate più sotto, nell'ambito della sintesi dei risultati e della pianificazione della ricerca sui cambiamenti globali.

È autrice di oltre 160 lavori su riviste e libri internazionali, inclusi vari contributi a *Nature*, *Science* e *PNAS*, e di oltre 300 comunicazioni (in molti casi a invito) a convegni internazionali e nazionali.

Il numero delle citazioni ricevute ammonta a oggi a più di 11,000 con un fattore di Hirsch (*h-factor*) di 55 (ISI).

- Articoli totali: 163
