

1st International Summer School in Bioremediation of Aquatic Environments

October 7th - 10th 2025

Stazione Zoologica Anton Dohrn,
Via Ferdinando Acton, 55 Naples - Italy

- Explore microbial solutions for cleaner aquatic environments
- Learn from global experts
- Join hands for sustainable ecosystems

- Registration open: from 15th of May till 30th of June 2025
- Contact: ssbiorem1@gmail.com

The first edition of the International Summer School in Bioremediation of the Aquatic Environment will be held at the Stazione Zoologica Anton Dohrn of Naples from October 7th to 10th, 2025.

The school will be dedicated to students, PhD students, fellowships, and early-career researchers working in the field of bioremediation. The four days of summer school will be focused on current interdisciplinary approaches used in the bioremediation field, focusing on the exploitation of microbes to remove or neutralize pollutants from contaminated sites. It can be considered a promising alternative to conventional chemical methods, which usually foresee high investment costs and do not exclude the formation of toxic byproducts. The program of the first International Summer School in Bioremediation, organized by researchers and technologists of the Ecosustainable Marine Biotechnology Department of the SZN, will enhance current knowledge in bioremediation techniques, contribute to habitat restoration efforts, and highlight the need for innovative, environmentally friendly solutions.

Lectures, short communications, and practical afternoon sessions will create a stimulating environment for participants and give them skills and tools on the most updated methodologies in the remediation field.

In the evenings, several social events in Naples will increase the exchange of ideas among participants and create long-lasting collaborations.

Detailed information on the program of our course and the online registration form for the SSBIOREM1 2025 will come soon

Registration fee: 330 EU
