

Davide Di Blasi has a PhD in Marine Sciences from the University of Genoa. His research focuses on the **ecology and biology of fish species, and fish communities**, exploring patterns of distribution, life cycles, trophic interactions, and ecosystem functioning in coastal and protected marine areas. He has experience in **underwater direct and indirect visual census techniques**, applying **robotics and remote sensing tools** to study fish assemblages and habitat features at multiple spatial scales. Davide has been involved in several national and international projects, combining fieldwork, data analysis, and ecological modelling to assess species and community dynamics. He has worked at the **CNR Institutes ISMAR and IAS**, later joining the **Stazione**

Zoologica Anton Dohrn, and he is currently a researcher at the **CNR Institute of Marine Engineering (INM)**, where he integrates technological and ecological approaches to the study and monitoring of marine ecosystems.
