## Research interests

I am **Group Leader** (Senior Scientist) of a research group at the Department of Biology and Evolution of Marine Organisms (BEOM), Stazione Zoologica Anton Dohrn of Naples (Italy).

I am particularly interested in the study of the evolution of metazoan genomes and development, as well as the genetic events that led to the acquisition of functional innovations, such as genomic duplications, expansion or loss of genes families (gene duplication), and in changes in gene regulatory mechanisms that allowed the enormous increase and diversification of animal complexity. My research group work on evolutionary mechanisms that control embryonic development, mostly dedicated to the study of deuterostome nervous system evolution.

My areas of expertise are: Evolutionary and Developmental Biology (Evo-Devo), Genetics, Comparative Genomics, Phylogeny, and Evolution.

I obtained the PhD in Neuroscience (2003) in Italy and then I moved to Spain where I spent 7 years (2004-2010) for two research post doctorates in Genetics and a brief experience as temporary Lecturer at the Department of Genetics, University of Barcelona. I was hired as Researcher (III level) in 2010 at the Department of Biology and Evolution of Marine Organisms (BEOM), Stazione Zoologica Anton Dohrn Napoli (SZN), and in 2019 as Senior Researcher (II level). I got the Full Professor Qualification (Abilitazione Scientifica Nazionale - Prima Fascia) in Comparative Anatomy and Cytology (05/B2) and in Zoology and Anthropology (05/B1), on top of the Lecturer Professor Qualification obtained in Spain.

In my scientific career I published almost 80 scientific products (74 research articles, 3 book chapters and 2 conferences proceedings) with a total IF 2020/2021 = 408.

I was invited as speaker in about 30 international Conferences, PhD courses, Summer Schools, Research Institutes and University. I have demonstrated to be able to attract national and international funding, and to have built a solid network of international collaborations. Additionally, I have tutored 7 PhD students, 4 postdoc fellows, 9 University master students and 2 Erasmus mundi students.

## My current research lines are:

1. Evolution of Nitric Oxide signaling in chordates
2. New fluorescent proteins (FP) from the oceans and their possible biotechnological application
3. Photoreception in deep-sea cephalopods
4. Opsin evolution and phylogenics
